

## Colesville Road Transmission Water Main Replacement (TWMR) Project

There are several construction projects by utilities and developers taking place on Colesville Road, which has led to some delays and changes to the Colesville Road Transmission Water Main Replacement project. Initially, WSSC was going to start the project at the intersection of Georgia Avenue and Colesville Road, however because of unexpected difficulties other utilities have encountered while digging through rock below the road surface they have fallen behind schedule. As a result, WSSC has decided to change our starting point so we do not further delay our project or conflict with other projects taking place on Colesville Road. Beginning the week of October 2nd, WSSC will start work at Spring Street and proceed north to Dale Drive.
