

Little Seneca Reservoir Project

Virtual Community Meeting Tuesday, November 2, 2021

WSSC Water, in conjunction with Montgomery County Parks, MNCPPC and the Montgomery County Department of Environmental Protection, is hosting a virtual meeting to provide interested citizens with details on a project to remove sediment from areas in the Little Seneca Reservoir.

Little Seneca Reservoir was constructed as an emergency drinking water source for local utilities during drought conditions. Water quality and capacity of the reservoir are threatened by the increase of sediment.
