

Water We Up To?

Temporary Water Bill Amnesty Program Launches March 1

Get Current 2.0 will help income-constrained customers with delinquent water/sewer bills. The amnesty program assists eligible customers by providing bill credits up to 50 percent and 100 percent of late payment charges and turn-on fees waived.

Sign up to be notified when Get Current 2.0 launches!

WINTER READY TIPS FOR YOUR HOME

Locate and operate your main water shutoff valve. If a pipe breaks inside your home, this valve allows you to turn off the water.

The temperature where interior pipes are located should be at least **55 degrees Fahrenheit**.

Allow kitchen and/or bathroom faucets to drip to keep water moving (**recommend doing this only when you're home**).

Open cabinet doors to expose pipes to your home's warmth.

If a pipe breaks inside your home, please contact a licensed plumber.

Discolored Water → Flush Your Pipes

Discolored water is common after a water main repair in your area. Follow these simple steps to flush your pipes and relieve trapped air.

Begin with the **SINK** faucet on **lowest** floor.

SLOWLY open the **COLD** water **SINK** faucet.

Opening slowly allows for the release of trapped air and may reduce the banging noise, known as a "water hammer" that can occur when water flow and pressure changes as a result of water main repair work.

Repeat on **each** floor, moving from **lowest** to **highest**, only opening **COLD** water **SINK** faucets.

Once the **water runs clear**, usually in 5 minutes or less, **turn off** faucets in the same order, **lowest** to **highest**.

You should also flush your refrigerator's water lines.
